FRONT COVER: Ukrainian flyer Oleksandra Shapiro (Shasha) launches her Babenko F1C folder at Lost Hills. This is a great angle captured by a cell phone! Sasha did very well in all three comps, 1st, 3rd and 4th. As Artem Babenko is her father, she is in good hands. Of course, Roy didn't mind her presence on the podium.

Free Flight Down Under March 2020

AFFS, SCC and WW Nationals programs 4

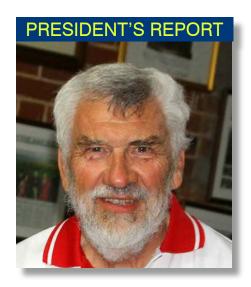

Well, another Fab Feb has come and gone, and Roy Summersby carried the Aussie flag high with three firsts and two seconds, giving him also the Top Dude award for both F1C and F1J. Excellent job Roy!

Our overall representation was down a bit from previous years, presumably due to the World Championships having taken place in the USA just a few months earlier and the mounting costs of travel. The organisers did a great job posting the

results on-line almost as soon as the rounds were completed, helping the illusion of almost being there. In the Kiwi Cup, both Craig Hemsworth and Vin Morgan made the F1B final fly-off finishing fourth and fifth overall respectively. In Max Men, Craig Hemsworth again made the final fly off and again finished a creditable fourth. Albert Fathers and Geoffrey Higgins carried the flag throughout in F1A.

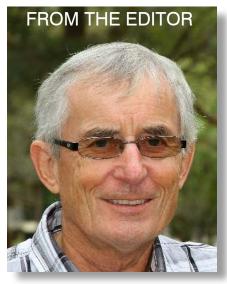

The "drone" issue continues to send ripples through the Free Flight community around the world. In the UK there was little dispensation for members of model clubs with all fliers having to do an on-line proficiency test (and pay a fee, of course!). In the USA there is a complicated procedure for securing the registration of approved flying fields, but once done the fliers there are at least exempt from the need for the models to provide electronic ID transponders. There has been a rear guard action by the AMA to have Free Flight placed in the same category as control line, arguing that since they do not

navigate the airspace using devices like transmitters they should not be classified as Unmanned Aerial Systems. However, it seems to me that this could lead to other issues concerning these things "flying around in the sky totally out of control".

Fortunately the sensible approach followed by the MAAA and CASA (described in an earlier edition of Free Flight Down Under) seems to be working in Australia.

As I will not be standing for reelection as President of AFFS in 2020, this will be my last President's Report (at least for a while!). I am hoping some "new blood" can be brought onto the AFFS Committee at the next AGM to keep it vibrant and relevant and look forward to catching up with as many of you as possible at Narrandera in April.

Paul Rossiter.

It's hard to believe four months have passed since the World Champs and I haven't flown a single competition since then. The dust, heat and damage seemed to have worn me out and I didn't want to open my model box. But open it I did and repaired the broken bits plus some of Kathy's and they all trimmed off nicely.

Kathy and I never made California this year, electing to place my hardearned dollars on top of the roof in the form of 20 solar panels. I believe I missed a stellar week of fun and comradery on the green green fields of Lost Hills.

Of course the fires and floods would have affected many and I hope you all fared reasonably during a horrid few months. I think Matt Hannaford nearly got burnt a couple of times then nearly drowned soon after.

Thanks to Mike Pettigrew, Roy Summersby and Vin Morgan for helping to put text between the pages of this edition. I always wonder when I'll be faced with a blank canvas. Of course you can help and I've said it many times, you may even like the experience. Roy has been our only long term "resident journalist" although Mike Pettigrew is a true talent.

It was tragic to hear of Ted Burfein's passing. Eight free flighters attended his farewell and it was a happy-sad affair with 100 souls reminiscing on the life of Charles Edward Burfein. I'll miss the big guy. Sonya did a wonderful job on the day and I was pleased that both Ted and Sonya didn't have to tread the awful path of a long terminal illness.

See you all downwind Malcolm Campbell

I've just finished reading FFDU; once again a great mag. I know I get it on the machine but I prefer to read the paper version. Well done Malcolm, just a few lousy results (mine) spoils it. Roy Summersby (AUS)

ED: Well you rectified your lousy results pretty well at Lost Hills Roy!

Thursday 2nd April

A very nice publication. Best Regards, Didier Barberis (FRA)

Many thanks, Malcolm. I have not read all of it yet but notice the long and good report from Lost Hills. I liked the photos of Mikhail Kosonozhkin and the way he packed up for the new launching technique. He is a dedicated flyer.

Best wishes, Anders Klemetsen (NOR)

Thanks for the newsletter, looks

Best regards Gary Peck (UK)

Thank you, Malcolm! At our last club meeting, some of the guys were raving about your offer of free subscriptions to FFDU and they had printed copies to show!

Thanks for all that you do! Norm Furutani (USA)

Lost Hills February

As seen through the eyes of Vin Morgan

Photos by:
Roy Summersby
Merry Smith, Sasha,
Brian Furutan, Julie May-Parker
and Vin Morgan

For all of you who visited Lost Hills in October last year I'm afraid I have to report that in February 2020 the field was covered in 3cm of lawn. There was no dust, the sun shone and the wind didn't blow. A relatively small number of competitors enjoyed near-perfect conditions. Several long-time Lost Hillers said it was the best conditions they had ever seen. The only downside was the longer fly-offs still ended up in the orchard.

There were fewer Australians this year as well. Albert Fathers, Craig Hemsworth, Roy Summersby and Vin Morgan stayed in mobile homes on the field while Geoff Higgins enjoyed the flesh pots of Lost Hills in Motel 6. A few days out from the event Motel 6 were offering rooms at good prices. It seems that after the difficulties of the World Championships — non-availability, sky-high prices — a number of people found alternative accommodation that they liked and

have returned to it. Canadians Ladi Horak, Tony Mathews are now convinced RVers.

The mobile home people drove up from LA to Lost Hills on Wednesday 5, via Walmart, Wasco to collect supplies. Walmart in Wasco has transformed living in mobile homes on the field. Before Walmart there were two very inferior supermarkets in Wasco that stocked unsatisfactory foodstuffs - and especially unsatisfactory drink. Walmart has everything; excellent fruit, veg, meat; a good selection of drink and also other useful stuff - chairs, tables, rubber boots, towels, pillows, and tent pegs. Originally, when they came to Wasco I had intended a boycott because they also have guns but it turned out impractical because the other shopping was so convenient.

Thursday and Friday saw the caravan park fill up. People from

motels in town also arrived to practice. The Canadians, who had been the first to arrive on the field set up stooges just outside their van and launched from within the van park. We thought this was a bit risky and drove a few hundred metres away to a clear spot.

The Isaacson Winter Classic/Kiwi World was flown on Saturday. The contest was commendably managed by Roger Morrell, the only New Zealander there this year. We flew seven rounds, no wimping out, and in view of the excellent conditions rounds 1, 2 and 7 were all 4 minute maxes. Albert Fathers was pleased to max the first five rounds in F1A for team trials points. In F1B Craig Hemsworth and Vin Morgan were among the 16 who made all the rounds. They continued in a more select group of six who made the seven-minute fly-off however the penalty for this was ending up in the

March 2020 Free Flight Down Under

orchard. For Craig this only resulted in superficial damage to the fin but for Vin it resulted in a broken boom. The damage was at least partly responsible for them both bombing the second fly-off the next morning. In Babenko (sorry, F1C) Roy Summersby was edged out of first place by the young lady on the cover of this magazine.

The next morning at 06:30 we biked down to where Andriukov, Kulakovsky and Kovalenko were glide testing F1Bs. They did simultaneous launches with pre-wound motors of 300 turns. The idea is to use altimeter data to compare sink rates in the same air. There probably wasn't much thermal activity just after dawn but there was variable drift which took the models of in different directions. Alex said you need to do many tests and average to get meaningful results.

After these flights we got to the real point of the early morning. A test flight and the hand-over of Craig's new "Black Swan". This is the latest from the AA stable and is a marked departure from all his previous models. The wings, tail and fin are all fully moulded of carbon cloth over rohacell. The wing aerofoil is conventional but very thin. The first high-power launch resulted in a bit of

a wing-over but a second with less differential incidence was pretty good.

In the middle of Winter it was a bit brisk riding down to the flight-line at 6:30. Long johns, thermals and gloves were handy in the mornings when the temperature got down to a few degrees but by mid-morning the desert sun made the woollies unnecessary and by lunchtime it was 20deg and comfortable in shorts and a T-shirt.

The North American Cup was managed by Tony Mathews for the Canadians. We, that is the team comprising Craig Hemsworth, Vin Morgan and Roger Morrell all dropped. We hung around the flightline instead of returning to the caravan park to get to the bubbly and sandwiches (those Canadians know how to run a contest) because Roy had maxed out and we thought it would be right to give him moral support in the fly-off. Probably unnecessary because he won anyway. We did watch the F1B fly-offs. At 4pm they went for 8 minutes and seven made it. Pretty good times but of course there is lift in the afternoon. The next morning Andriukov got 7:42 to win. A good time, and at around 7

am most likely without thermal assistance.

The weather was still perfect for Max Men F1B, F1C and F1P on Friday. We (F1B flyers) used the Warm Lift thermal detection system: https://play.google.com/store/apps/d etails?id=me.warmlift.android&hl=e n AU

After some less-than-good experiences in 2018 and 2019 I think we might be getting this under control because we actually managed to pick good air for all the rounds. Vin dropped by stalling all the way down in round 3. The model and trim was the same as was used for rounds 1 and 2 but the tail was a bit high for the later turbulent conditions. Tony Mathews and Ladi Horak next to us on the line were commenting on our thermal detecting system. They had a thermistor set but in R5 Tony chose to fly when we didn't think it looked at all good. He dropped. Conditions were a bit tricky, and lots of famous people dropped in poor air Ghio, Andriukov, Kulalovskiy... Craig got through comfortably and made the 6 minute fly-off. He then got 6:58 in the next fly-off for 4th place. Roy made all the rounds; those F1Cs have so much performance, but you still need a bit

of cunning lift-picking. He got 5:41 in the second fly-off to win – again.

Albert had a pretty good time in similar tricky conditions in F1A the next day. He only dropped the first round in the early morning calm. As was gratuitously pointed out to him afterwards he should have waited until near the end of the round when there was a bit of wind. The performance of the latest F1As is just fantastic. Fourteen out of forty starters maxed out; ten made the 6 minute fly-off and six made the 8 minute. In the 3rd fly-off round Per Findahl got 8:20 to win.

The dinner (it's called a banquet) was in the Community Room at Wonderful Park in Lost Hills. Mexican food was provided by Gabby's. It was enjoyable but they're a funny lot. As soon as the food and presentation part finished everything was packed and everyone went home. Wanting to chat on a bit, we collected some left-over bottles and entertained for a while in our van. It seemed to us that this was expected because the mini contests the next day were not scheduled to start until 10:00.

Only Roy flew in mini, with an F1J. With the light breeze and 2-minute

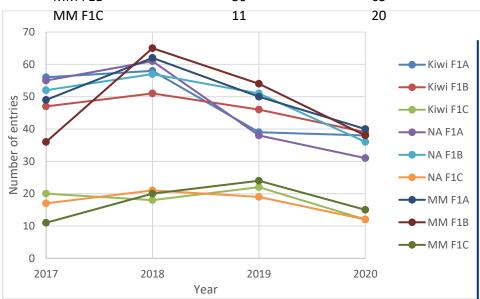

maxes it wasn't too hard so we left him to his own devices and used the morning to pack-up and put the motor bikes away in the container. On returning we found Roy was lining up for the last fly-off. Only second this time but he did end up Top Dude (American for best flyer) in both F1C and F1J. Pretty good effort.

All in all a pleasant and enjoyable time. A bit of a contrast to the heat and dust (sounds like a film title) of the World Championships in October last year.

Vin Morgan

I had a look at entry numbers

Year	2017	2018	2019	2020
Weather	Rain, mud	Good. Some wind	Drizzle, rain, wind	Very good. Calm, dry
Kiwi F1A	56	58	39	38
Kiwi F1B	47	51	46	39
Kiwi F1C	20	18	22	12
NA F1A	55	61	38	31
NA F1B	52	57	51	36
NA F1C	17	21	19	12
MM F1A	49	62	50	40
MM F1B	36	65	54	38
MM F1C	11	20	24	15

CONCLUSION: As you can see, numbers crept up between 2017 to 2018, but from then on F1A and F1B have decreased quite severely. Perhaps the 2020 event was affected by being so soon after the World Championships.

F1C is different, increasing to 2019 and dropping in 2020. The low numbers in 2020 is due mainly to the absence of the Chinese and Mongolian flyers. The Chinese from restrictions due to the covid-19 virus and this may also have hindered the Mongolians.

Perhaps the reports of the fine conditions and the break in 2020 will see more of the usual flyers returning in 2021. Hope so. *Vin Morgan*

March 2020 Free Flight Down Under

Fab Feb 2020

Photos by: Roy Summersby Merry Smith, Sasha, Brian Furutani and Julie Parker

A few brief notes on the F1C events by Roy Summersby

Day 1

Down the M1 freeway to the airport leaving home at 6.30 am, I was lucky as Andrew Linwood had offered to take me. I normally catch the train which is hard work as the train is full of workers and not much room for a model box and suit case. Thank you Andrew. Easy check-in as the airport didn't seem busy; not sure if the corona virus has something to do with it. I had booked extra leg room and ended up with a row to myself, stretched out and actually had some sleep on the way.

Day 2

Through the dreaded US immigration etc in record time. Last year it took 90 minutes standing in the queue. Once Vin had caught up (he was coming from Melbourne) we set off to pick up the RV. CA law states that we have to have one night s sleep before driving an RV so it gets parked in Motel 6 for the night and we head of to shop at Wasco in the morning.

Day 3

Wasco is our stop to fill our RV with food and drink. We leave at 5.00 am and it's only a three hour trip at this time of the day. Three hours shopping at WalMart; I'm glad Vin is only my "wife" for the next fourteen days! It was then on to Lost Hills flying field were we were greeted by Brian, Charlie, John, Mike and the Canadians who were all well established.

I spent the rest of the day assembling F1C front ends and putting the starter together, talking and watching Vin put up a few test flights from the camp site. Albert and Craig arrived in their RV late in the afternoon just in time for happy hour.

Day 4

We took the RVs out to the middle of the field to do some practice flying. Vin and Craig the rubber F1B boys were winding and turning screws up down, in and out, they never stopped. Albert was getting some nice launches with his F1As. I flew two models that were both going well. Flying conditions were just perfect and in fact stayed perfect for the two weeks.

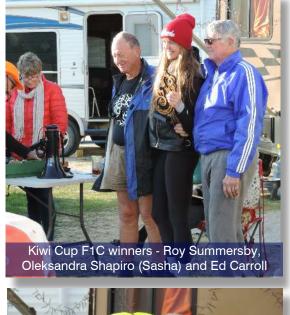

Day 5

More practice, I flew a third model which hasn't let me down and in fact it is this model that won the Maxmen comp for me in 2016. It did it again this year. The F1B boys kept on practicing all day and Albert continued with some fine trimming.

Day 6

KIWI CUP and my birthday - oh hell I'm sick of them. I've had too many.

My seven rounds were 2 x 240, 4 x 180, 1 x 240 and 1 x 420 the 361. The seven minute fly off this put me in the trees, but the model was on the ground without

damage. The 10 min fly off was next morning, I did manage 2nd place with 361 sec. I was beaten by a girl, but a very nice girl.

Day 7

The day of the Kiwi mini comps, that is F1J for me. First flight is to the ground then 4 x 120 then 1 x 240 max and the first flight breaks any ties if needed. My first flight was 550 seconds. This flight put me in the trees and, by the time I had a long enough pole for retrieval, it looked like I would miss the second round. As luck would have it I scraped it in. No mistakes for the rest of the day and my 9 min + flight gave me the win.

Day 8

Rest day for me, the rubber boys kept winding on the turns. They both had a lot of rubber to get through.

Day 9

NORTH AMERICAN CUP F1C

Only 5 rounds and an easy day; 3 x 240, 2 x 180, 1 x 480. I made 438 sec giving me a win, but I was on the ground amongst the trees, in fact I had gone 678 metres into the trees. It seems the models hit the trees then fall sideways, the result being a damaged tip and stab. This will be fixed at a later date as I have other models in the box that I am quite confident with. The Canadians who run the comp put on champagne and light food at the prize giving making it a very enjoyable evening. They also have medals for team places. My team, Ken Faux, Mike Roberts and myself won the teams competition.

Day 10

Started early with an F1B fly off, then more practice for the F1B boys Vin and Craig.

Day 11

Rest day, which is really more practice. The evening was different as I was taken out to dinner, at Gabbies. This is a planned Lost Hills social night.

Day 12

Rest day, in other words more practice.

Day 13

F1A & F1C Maxmen. 2 x 240, 5 x 180, 1 x 360, 1 x 480 were to be the round times. I made the 480 round with a little bit of luck, I did have two close rounds - one in the 2nd 240 and 1 in one of the 180 rounds. Due to what one would call a slight mishap I flew late in the fly off period. I could say that this was tactics, but that would be heifer dust. It did give me the best air of the seven minute period and a Maxman win, so one had to be a happy boy. My time was 341sec. All of

Page 12

Craig's practice had paid off as he finished with a very creditable 4th place in F1B. Well done Craig.

Day 14

F1A MAXMEN 2 x 240, 5 x 180, 1 x 360, 1 x 480 were the rounds. Albert did well just dropping the first round. In the evening the Americas Cup

Roy launching for Albert Fathers

POWER WOMEN Larissa, Julie and Sasha

banquet was held. It finished early as there was a fly off for F1A at 7.30 the next morning.

Day 15

Maxmen F1A fly off followed by the minis, F1J again; it is a fun event and the numbers are increasing. Round times were back to normal, 5 x 120, 1 x 240, 1 x 360, I had a good flight of 319 sec, good but not good enough to beat the winner who just made the 360 max, still I was very happy with 2nd place and the time I did.

Day 16

Pack up and go to LA. This was easier than normal, no dust, and no mud to clean up. What a change from some years. Goods were put back in the storage container and it was a comfortable drive in the RV to the

Apollo depot in LA. We took a taxi to LAX, then an eight hour wait for the flight home. The eight hour wait is not so bad if you can con your way into the Emirates lounge. They have some very nice food and drinks. They even tell you when it is time to go to your gate.

To sum up it was certainly a Fab Feb year to remember. I can't remember going to a better one. I have been there when it's been freezing cold, windy and wet but this year it was just perfect for the whole time; in fact it was shorts and tee shirt weather every day. The total numbers were down a bit due to the World Champs being held only three months before, as well as some having to stay home due to the corona virus.

Roy Summersby

We haven't had a go at the fly-off debate for a little while now, so I thought we should stir the pot a little to get it started once more. Why? Well, like it or not, the reduced availability of flying fields that have distant boundaries and no trees, makes it clear we have a problem and as we all agree, the situation has been exacerbated by the increased performance of our models resulting in them often travelling well over 2 kilometres in a fly-off.

I believe we need to move forward with this discussion once more in a,

hopefully, reasonable and logical manner, so let's talk about it again.

The approach I'm throwing into the ring for discussion here is based on leaving models as they are rather than attempting to reduce their performance, and instead; adopting a fly-off process that keeps models within sight of timekeepers and within the boundaries of the fields we use and one which provide an agreeable outcome.

I'm suggesting we look again at the use of D.T, or highest altitude, fly-offs.

I'm suggesting that we kick the idea around a bit until we have something worth trying as an experiment in those events where we're allowed to alter the rules and give it a go. If it evolves into a fly-off system we consider to be OK, it may possibly turn into a template worth putting forward as a proposed rule change.

I don't intend to get too involved in the arguments about limiting performance as that's already been beaten to a pulp by all and sundry over the last few months, although I would just like to remind you of one thing: A model achieving a 3 or 4 minute max during the contest rounds will travel the same distance for a given wind strength whether it's been nobbled to reduce its performance or not. On that basis, and as a generalisation, I'd say that reducing model performance has no real benefit other than to maybe reduce the number of models in a flyoff and to partly reduce the distance covered in a fly-off.

I say "partly" because if we are pragmatic about it, we would argue that reducing model performance won't fix the field size problem because you can only achieve a limited benefit from reduced performance initiatives. Why? Well, if we reduce the performance to the point where our models are only good for 3 of 4 minutes in a fly-off so they stay in the fields we have, nobody would want to fly them.

I pause here to identify myself as a C flyer with minimal knowledge of how to fly a B and even less about the art of extracting the best from a modern circle-tow, zoom launch A model. Please forgive me therefore, if I overlook a valid part of the debate specific to A and/or B.

Here's some thoughts around the topic of reduced duration fly-offs:

Our usual A, B & C contests, and all our other free flight duration contests, are about ultimate model performance being achieved within a fixed set of rules. That performance is, of course, to be achieved by a combination of the model performance and the skill of person flying it.

When we reach a situation in a contest where more than one model/flyer combination has achieved the set task of a set number of rounds with pre-determined maximum flight times, we need to find a winner by using a tie-breaker. The present arrangement is to add additional rounds of increasing duration until we have a winner. We all know that, because it's a fly-off and we all think it is the correct way to resolve a tie in a contest because it's fair and we've always done it.

But, is it always fair? I suggest that it may not be as fair as many believe.

Why you ask? Several factors make it so, and let me give you some random examples:

 Field conditions when flying extended duration fly-offs can alter the result:

- For example: Two models launched at similar times can go in slightly different directions. One is readily visible for the entire time it is flying, the other can fly behind a tree and be temporarily out of sight and even though we know it must still be flying, the model gets clocked-off because of the 10 second OOS rule and doesn't win despite it subsequently being seen again still flying, and achieving a longer flight time than the model that won. Very few of our flying fields are entirely treeless and I know that we have all experienced examples of what I've described above.
- 2. Field conditions again: While we attempt to conduct fly-offs in "dead air" to make it a true test of performance, there is very rarely "dead air" available because there's always lift around in one form or another. Consequently, the outcome of the fly-off is often manipulated by sheer luck: All models fly in a circle, but they also wander at random, with the result that some pick-up a bit of good air part-way through their flight and some don't. Which one wins? Answer: The one that had the longest flight based to some degree on model performance mixed-in with it happening to pick up better quality random lift than the other models in the flyoff. Is this a true test of relative aircraft performance? No, not always!
- 3. Extended fly-offs have also become a test of timekeeper eyesight and a test of optical quality of the binoculars being used. Models a long way away are often lost in the binoculars and generally found again, but some aren't.

Murphy's law 4/180 says: In a dawn fly-off, the models will always fly towards the sunrise.

This makes the task of timing them very difficult indeed. A model lost by timekeepers and not found again (yes, let's be honest - we all know it's happened) is likely to be clockedoff before or after it lands based on the timekeeper's best efforts to guesstimate where it is and when it will touch down. Other versions of this problem include things like undulations of the flying field hiding the actual moment that one of the models touches the ground, while not hiding another, and this also could change the result.

We could go on with more and more examples of timekeeper difficulties making it too hard for them to do their job in a fly-off, but you get my drift, I hope. (sorry for the pun)

The point here is: Our existing flyoff system is often flawed and often produces an incorrect result, yet we accept it, because that's what it is, and we've always done it that way.

My question is: Would a reduced duration version of a fly-off be any more flawed than what I've just described? Maybe, but not greatly, is my answer.

In an ideal, dead air scenario, the model that gets the most height at launch and/or has the lowest rate of sink on the glide during the flight, is the winner of a fly-off.

This is the fundamental basis of altitude fly-offs where, as we know; in the D.T. fly-off version, the contest director nominates a flight time being a specified time after launch at which the model must be D.T'd and the winner is the model that achieves the longest flight time from launch to reaching the ground again. This procedure is based on the assumption that the models will all descend at the same rate under D.T and therefore the longest flight time to ground must have been recorded by the highest model at the end of the prescribed flight time.

The theory here is that the highest model at the prescribed D.T time

would be most likely to achieve the longest flight in the fly-off if a full duration fly-off was used. This form of reduced duration fly-off therefore, tries to judge that outcome based on the relative heights of the models to each other at the end of the prescribed flight time.

That being the case, it becomes essential to select a flight time that's long enough to pay respect to the climb height achieved as well as taking into account some measure of glide performance, and also; to allow the opportunity for someone to fly into lift. These are the ingredients of a full fly-off we are trying to retain in a reduced duration fly-off.

A prescribed flight time of at least 2, and more likely 3, minutes should be selected if conditions permit.

You will immediately argue that not all models descend at the same rate under D.T so it's not a true test of height at the point of initiating the D.T. While that's no doubt correct, do we think the difference is enough to alter the result and even if it did, would that be any more of a flawed process than a full duration fly-off? Possibly not.

I'd suggest however, that 'C' models all come down at reasonably similar rates, but I'm not sure about 'A' and 'B' models.

You will also immediately argue that the early D.T. fly-off takes away your opportunity to pick up good air <u>later</u> in your fly-off flight and that's also correct but; selecting a 2 or 3 minute interval from 'launch' to D.T'd time still gives you an opportunity to pick-up some good air. The timing of when your model flies into good air, if it does at all, is a lottery in either version. On that basis, is this version any worse than a full duration fly-off when it comes to picking up some lift? Apart from a reduced window of opportunity to pick-up some lift, I'd say probably not, because as I said; in either version, finding a bit of good air is still very much a matter of luck.

One way we can eliminate the issue around variable rates of descent under D.T, is to interrogate the electronic timer in each model to find out the recorded height of the model at the moment of D.T and this would be used to determine the fly-off winner based on the presumption that the highest model would win. We've already discussed the flaws in the "highest model is the winner" approach, so that's the same as the D.T fly-off. Using the timer is, in my view, more complicated approach than just having a D.T fly-off because:

Firstly; does everybody have a timer that records and can regurgitate this information? Maybe not.

Secondly, are we sure that the timer can't be manipulated to give a different answer to what just happened during the flight?

And then, there's the problem of tagging the timer to make sure you are interrogating the timer that made the flight and, you could argue that maybe there's a problem of making sure of proper timer calibration in its

height measurement. Yes, I know, people have worked out some sort of weird rain dance with the model before the flight in which you raise and lower it in the presence of the CD to create a fingerprint to confirm identification, but it's all a bit complicated and time consuming in the event of large numbers in a flyoff.

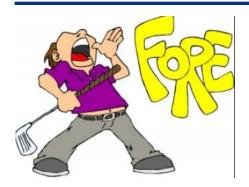

I feel that this timer style fly-off has the potential to introduce more problems than it solves even though in the purely technical sense, it is the best approach to a reduced duration fly-off.

If we sum-up: What I've tried to do here is make a point that even the full duration fly-off process, that we all know and love at present, is potentially flawed because of external influences and I've tried to say therefore, that maybe the reduced duration fly-off isn't much more flawed (if at all) and perhaps it's worth a try.

Both fly-off systems can be a bit of a lottery based on luck, so if we're going to gamble on the result, we might as well do it with a much shorter retrieve by using a reduced duration fly-off. I think it's worth trying something and we'll never really know if we like it until we try it out.

Over to you.....

Mike Pettigrew January, 2020.

I've always liked rubber power.

A simple process of compressing the rubber, which then releases with

great force at first, with the aircraft gaining altitude, and then reducing power to land softly downwind as far as you can make it.

So I was at the golf driving range during the week... something I also love doing... and suddenly realised it was almost the same thing.

The 'rubber' ball is compressed at impact, and releases with great force. It actually 'flys' inasmuch as the backspin makes it climb, and a little sidespin (torque?) - tho usually unintentional in my case - makes the

trajectory curve in one direction or the other, and you try to judge the wind direction and everything else to get it to fly as far as you can make it.

Essentially, golf is a rubber-powered activity. I wondered if that was part of the attraction?

I don't know how thermals come into it - though I did see Greg Norman hit some long irons back in the 80s that looked like they would go OOS!

AUSTRALIAN FREE FLIGHT SOCIETY MULTI TRIAL SELECTION PROCESS ELIGIBLE EVENTS

2021 World Championships, France for F1A, F1B and F1C

AFFS has Approval in Principle from the MAAA to hold a Multi Trial Selection process to determine the Free Flight Team for the 2021 World Championships in F1A, F1B & F1C to be held in France.

The trial period commenced on 1 Dec 2019 and runs through to 30 Nov 2020. (As is established practice). Eligible events to be flown in Australia will include: the Australian Free Flight Society Championships, the Widgiewa Cup, the Southern Cross Cup, various State Championships, West Wyalong National Champs and one additional Trial Event in Queensland. *Please note that there will be no Western Australia Trials due to a lack of field availability*.

The Event Schedule follows:

DATE	EVENT	CLASSES	LOCATION	CONTACT	EMAIL
Apr 2-8	Widgiewa Cup	F1A,B,C	Narrandera	Phil Mitchell	filnoels@bigpond.net.au
Apr 2-8	AFFS Champs	F1A,B,C	Narrandera	Phil Mitchell	filnoels@bigpond.net.au
Apr 11-13	Southern Cross Cup	F1A,B,C	W. Wyalong	Roy Summersby	roydi132@optusnet.com.au
May 23-24	Qld State Champs	F1A,B	Dalby	Mal Campbell	actrain@ozmail.com.au
Jun 6-8	NSW State Champs	F1A,B,C	W. Wyalong	Roy Summersby	roydi132@optusnet.com.au
Jun 6-8	Vic State Champs	F1A,B,C	W. Wyalong	Vin Morgan	vinmorgan2@gmail.com
Jul 7-15	WW National Champs	F1A,B,C	W. Wyalong	Roy Summersby	roydi132@optusnet.com.au
Sep12&13	Qld Trials	F1A,B,C	Dalby	Mal Campbell	actrain@ozmail.com.au

NOTES:

- 1. Contestants may include the results of one FAI listed Open International contest (flown overseas) in their scores to establish their position in the order of merit for a team place.
- If there is a need to separate contestants tied for team places, additional scores (forth best, fifth best and so on) will be used to establish final order of merit. Even if more than three scores are used, only one overseas score is allowed.
- The dates for extended events e.g. the Widgiewa Cup/AFFS Championships, NSW & VIC State Championships and West Wyalong National Champs are given as a block to allow minor changes to the program if adverse weather conditions occur.

Funding from individuals for improvements AB Field West Wyalong

A lot of money has been raised over the last few years and many, many thanks must go to all those individuals that who contributed. The funding activities began when I proposed that we ask for contributions to replace the roof on the house. The target was \$25,000. This turned out to be a huge success and within twelve months we had raised \$27,000 which was mainly cash donations from a wide variety of people. In the second half of 2017, I had modellers saying to me "I am sorry I can't give you cash but if you can sell these engines and kits will it help". All of these donators were published in our magazine every two months. To me, it showed that modellers had trust in us and faith in what we were trying to achieve, which

in the long term is a multi purpose flying site. I had been selling goods from Big Kev's estate since 2016 which has added to our general funds.

Now the roof was finished, but there was and still is plenty that could be done, so I kept taking goods, mainly engines and kits and putting them on eBay, which over the last few years has been very successful. Some of these goods have come from deceased estates such as Big Kev and Robert Ockenden. The rest has come from modellers that just have too many toys in their cupboard that they have collected over the years, and don't intend to use them. Modellers like Adrian Bryant, John Corby, Stan Hinds, Reg Millsom, Paul Rossiter, and

Dave Bailey, just to name a few. Well done guys.

If you are one of these modellers that just have too much stuff, or the wife is saying, 'get rid of this junk', then pass it on to me. I will see if I can turn it into cash to improve the AB field at West Wyalong.

ALL money donations, engine sales, model sales, etc, have been applied to improvements to the AB field at West Wyalong. These have helped us tremendously thank you all, and keep them coming.

Roy Summersby.

Are We Losing our History? A Search for Photographs

by Mike Pettigrew

History has a funny way of becoming lost.

Keeping track of Australia's aeromodelling history has been talked about over the years with various efforts made to record what happened once upon a time when we were all young people, but I fear that we're not doing enough and we're at risk of losing track of the story of our hobby from years gone by.

That said, the establishment of the library at the West Wyalong field is a major step forward, particularly with the addition of the John O'Donnell collection (admittedly not Australian, but important none the less because of its completeness), but it doesn't have in it a specific compilation of text and photographs of early Australian aeromodellers or their models.

I thought we could talk about that, and I could show you some older photographs like the one below, to get you interested and see where we go from there. This is a photo of Alan Edwards, and it looks like the old Canberra field. Russian influenced F1C model (photo courtesy of Peter

Lloyd) – note the demised model behind him with the pink fuselage so not everything went well that day.

This note is written for FFDU so, I'm talking about free flight rather than radio modelling here although I do have a little bit of our early radio days in photographs. Free flight and control line flying were the only options available when I started into model aircraft in the late 1940's and early 1950's and, of course, free flight preceded control line, so it seems to me that free flight should be our primary and/or initial focus when trying to do something about saving our history.

Sadly, much of the very early
Australian aeromodelling history has
partly gone with the loss of the early
pioneers including Jim Fullarton and
of course, people such as Alan King,
Jack Finneran, Arthur Cooper, Les
Fahey and the like, but we should do
what we can from where we are now.

I'm one of the many that have learned to appreciate history more as I get older. Yes, we took photographs of our modelling out of general interest back then, but it wasn't done with any sense of history in mind. Looking back, I sometimes wonder why we always seem to take photographs of models but often omit the modeller that owned it?

As I see it, the primary sources of records of our past lie in the following:

 Old Australian modelling magazines. We have a number of wonderful, but sadly long gone, Australian modelling publications that inspired us in the years past and we have some of these at
 March 2020 Free Flight Down Under West Wyalong mixed-in with our excellent collection of British and American modelling magazines, but I'd venture to say that our collection is by no means complete.

Certainly, the work of Adrian Bryant and Russ Hammond in keeping a modelling magazine alive stands out, as does the Rogers/Buckmaster work of some years ago. How much of it is left now?

2. Books on Australian modellers and modelling. There must be a few, although the only one that immediately comes to mind is the John Marquette book that has quite a few chapters in it, each written specifically about individual modellers. I remember this book because when it was being compiled, I didn't think John would ever get it off the ground and published. But he did; and it's a very worthwhile bit of history to keep.

Such was my lack of belief back then, that when John asked me to give him some of my modelling past to include in the book, I didn't get around to doing it, which shows how little foresight an sense of history I possessed back then.

There must be more such books and I'm sure our librarian at West Wyalong will be on top of all that!

3. Individual modeller's stories as printed in newsletters. We've seen a number of these over time and all I can say is; there should be more such articles, and when they appear in any of the many

excellent seasonal modelling newsletters currently in production by people like John Lamont and especially Malcolm Campbell who deserves a gold medal for diligence and dedication, they should be copied and put in a special history file. I guess that would be at West Wyalong?

 Articles written about days past by modellers. We see a bit of that still, but not very often which is a shame because such articles are pure gold when it comes to recording history.

Many years ago, I was responsible for publishing the newsletter of SAM 1788 and as part of that I managed to talk Monty Tyrrell into writing the occasional article about his early days in modelling. I'd like to think that most people would know who Monty was and I can assure you that his stories of early days control line flying were fascinating. Where are they now? To be honest, I have no idea as my old files and documents from my days with SAM 1788 seem to have vanished over time. What a waste!

Maybe there are hard copies of those newsletters and those articles in the hands of dedicated collectors of newsletters, who knows? If there are, please make a deal to get copies into the hands of the librarian at West Wyalong.

5. The last in the list, but by no means least, are photographs.
This is where we seem to be really dragging our heels!

There must be literally thousands of photographs lying around in cupboards and albums in the

homes of modellers that need to be rescued and copied into a history file somewhere, and my view is that we need to make a move ASAP to do something about it.

Let me start naming some people:

Peter Lloyd is, I suspect, the custodian of some excellent old photographs from days gone by. He has recently circulated a few of them showing people such as Alan Edwards (photo at the start of this article), Bill East, John Borrill and even one of me firing-up an F1C model on my way to winning F1C at the 1975-76 Loxton Nationals. I've reproduced it here and I hope Peter doesn't mind and that it's not copyright!

I thought it interesting and worth reproducing because it shows my friend, the always helpful Roy Summersby, standing-by with a spare battery and plug lead!

It's funny to see that times haven't changed all that much! (Forty four years later, I have a loan of one of Roy's starters when flying F1C)

We'll come to Roy and his photographs shortly.

For a while Roy and I couldn't figure out where the photograph was taken which prompted me to rattle through a box of trophies and I found the trophy as below:

March 2020 Free Flight Down Under

So, we managed to link two bits of information together.

We could have saved some time by just asking Peter where the photo was taken but I didn't think of that at first which still shows what we're up against – I never was very smart!

So, Peter Lloyd, I'll be talking to you sometime soon hoping to get you to unlock and share some of your treasures. Peter's recent article in FFDU was very impressive and maybe we can look forward to some more excellent articles and lots of old photos.

Remember that Peter's dad was Ford Lloyd, a very notable power flyer of the 1960's and thereabouts and there must be some historical photographs of Ford and his models. This is where I need another kick in the backside because Ford and I flew together a lot, but can I find a photo of he and I with models back then? Not one...........

Roy Summersby is another who has some old photographs and I've been encouraging him to dig around to find what he has so we can copy them. I've already scanned around 30 of his old slides and sent them and the digital files back to him for safe

keeping. Some of his photo's were on Ektachrome and seem to have either faded or discoloured over time, but I did what I could with Photoshop to restore them such as this one of Roy with what I think is his first FAI Viking. It was the diesel powered one and while you may think he's running the motor; a close look shows there's no prop on the motor, so it looks as if he's struck a pose for the photographer. This must be back in

John was a really good power flyer of the 1960's and 70's and beyond.

That's John at the bottom of this page and to this day, I keep in contact with him. JB now lives up in Caloundra and is a radio flyer in his retirement. John has a collection of scanned old slides but sadly, they lack quality and can't be enlarged in any detail, but I'm hoping he might one day find the originals so we can re-scan to a better quality.

the mid-1960's and it was one of the discoloured slides that I've struggled to get back to an acceptable quality.

Two more of Roy's collection are shown here as well. The first one is a very young Dave Simons. Also attached later is a photo of Dave at the 1977 World Champs sporting the

same hairdo! (he's the one in black with the glider). You will also recognise other modellers of the 1970's including Peter Smith (Canberra), Bill East, Max Boccario, Howard Gostelow partly hidden, and Peter Lloyd was there as well.

Up the top of the page is a photo of another Dave; Dave Thomas this time, at Richmond. Not sure when it was taken but it has to be in the 1970's

because we first used that field around 1972.

Incidentally, I have more of the 1977 World Champs, but by no means enough to make a worthwhile article.

John Borrill is a name I hope many will remember as On the next page is one of John's slides with him standing on the left of the three people as we view it, me again in the middle (sorry!) and to the right is a flyer that I reckon was one of nature's gentleman: Bert Holmes. This, I suspect was also at Loxton as my outfit and model seem to be the same as in the Peter Lloyd photo earlier in this missive and I guess it was the three placegetters in F1C.

March 2020 Free Flight Down Under

Well, I'm
prepared to scan
old photographs if
people lend them
to me. I'll make
digital files of them
and hand them
back to their
owners together
with a memory
stick loaded with
the digital files I've
scanned. I'll also
keep multiple

Spooky isn't it where the work of two photographers taken at similar times in the same place come together for the first time after 44 years!

Let's pick on Peter Greenhill now; Peter's dad was Bob Greenhill who was a legend in earlier modelling, so you'd have to say there are some family photos around the Greenhill residence. Maybe Peter can chime-in to the discussion and see what he can find.

The list can go on, I've only picked on a few publicly to stir them up, but I might ring my old mate Basil Healy as well, to see if he has photographs because he was flying free flight in the second half of the early days, and was a keen and very effective power flyer in his day.

I will also speak to Barb Cooper, widow of the late, great, Arthur Cooper (Coop) to see if she has albums. We keep in regular contact as we go back many years as modelling families with our children growing up together and spending a lot of time together through the common thread of aeromodelling.

So, what's the plan?

master copies for the West Wyalong library plus a back-up for security. I can scan, prints of any type up to A4, sheet and strip film negatives including 5 x 4, 6 x 6 cm, 35 mm including mounted slides of either Kodachrome or more traditional style colour films such as Agfa, Ektachrome etc, and can also scan colour negative film as strip or mounted of the sizes noted above.

Why me? I have a very high quality scanner as used by photo shops to scan customers old photos (not all that I scan would be scanned to the highest possible resolution however, because of the file size generated) and I have Photoshop and a middling ability to drive it. Also, I understand the medium as I earned a living for some years in photography in the world of fashion and product photography. That was an escapist adventure in the early 1960's, before going back to my basic training of engineering relating to the building industry.

They say that if you remember the 1960's you weren't really there. I remember the 1960's however, and I'm pretty sure I was there. It was an interesting time.

I've digressed again, but isn't that part of storytelling?

If I can get some photos contributed in any quality or form, I'll save them to a central file available to view (NOT BORROW) At West Wyalong plus they would be backed-up at my place as well, and of course, returned as originals plus a memory stick to the owners. Depending on what we get and of what quantity, the photographs can form the basis of articles for FFDU and other spin-off's so we can "spread the knowledge and history" once more.

Have a look at the NSWFFS newsletter sometime after July 2019 and you will see an article I prepared of black and white photographs taken at the 1969-1970 Wallacia Nationals. As I see it, photographs like that are worth preserving and I hope you agree. That's the sort of article that brings the past back to life.

So, do we have model flyers with photographs who are prepared to let them be copied, stored and circulated? I'd love to hear from you!

If you decide to scan slides yourself, please try to scan to show detail and don't toss the originals away; throw them in my direction.

Pleeeeessse! Come up with something as we're losing our history too rapidly for my liking.

February 2020.

Construction Corner

box; yes it does have two tapers before becoming a straight tube but not difficult. All one has to do is glue the formers on the box, and then add the stringers, the jobs done,

All those semi-round formers can be cut out with a laser machine; Aaron Booth can do that little job for me, thanks Aaron. What to use for power, electric should be the go, easy to start, adjustable power and time settings using a Hubin timer. Now the power, I'm sure Michel Towell will come up with a ducted fan unit suitable for me, so time to start building.

aircraft is an early Russian fighter. well in my mind it was. built a ducted fan job before. I had to have a closer look; the plan was from a Veron kit which sold in the mid 1950s. If you could find a kit now it would be 60 years old and the balsa would be just terrible. The Allbon Dart which was started using a cord (I don't think so) hard enough

Looking closely at the plan I see no problems with the flying surfaces, now the fuselage, it looks complicated but further inspection it is really quite simple it is just a

One, well me anyway, cannot go

into the plan drawer without finding

excited about. This time I stumbled

something interesting or to get

upon a LAVOCHKIN 17 plan; the

Now that's different; I've never

power shown on the plan is an

The three boxes, well it is really six half boxes as it is built in two halves before joining together. I was careful making the boxes but not careful enough, if they are out at all, the formers are either too big or too small. I will remember this next time and make jigs to hold everything dead straight. In the end the barrel

March 2020 Free Flight Down Under

fuselage, and that is what it is, a barrel, came out quite well with a little packing here and there. I thoroughly enjoyed building it; one could say "barrels of fun".

I covered the model in polyester tissue and as you can see it is painted silver, a very easy colour scheme. Nothing fancy in the decoration either with only a few red stars, the Russians kept them simple. I did make a few minor changes like adding half ribs in the wings, but mainly stuck to the plan.

Will it fly? Well, Model Aircraft January 1953 says it does, they even put it on the front cover. Being serious it does have a good chance, shoulder wing, a generous stab and some dihedral. My only worry is the weight, the model is light but all those electrics bits and the battery are heavy, we will see, anyway jets are supposed to fly fast.

Roy Summersby

Wing span 960 mm
Fuselage 730 mm
Weight without electrics 270 g

Jim Clem's 1/2A Witch Hawk modified to E36

By Philip Letchford

A few years back I bought one of Jim Clem's old Tee Dee 049's from his estate with the intention of building one of his models for it. First I considered the Country Boy but after finding out how big it was I settled on the Witch Hawk instead. The 1/2A Witch Hawk is still in the pipeline and it will be pretty much like this one construction-wise.

The tubes I use are from cheap CF fishing poles bought off E bay. They are not in the same class as the tubes we get from our specialist suppliers but they are light and strong enough for our needs. I start off by downloading a design I fancy from the internet and either print it out on A4 and glue the pages together or I get it printed up at Officeworks which is the better option. There is no need to alter the wing and tail on the plan but vou will need to redraw the fuselage to accommodate the electrics and the CF tail boom. I put the prop driver in the same place as the TD and the CG

worked out ok. The tubes I use for spars have a slight taper and weigh around 2.3 g each. I stack drill half of the ribs with a 3mm drill and the rest with a 2.4 mm drill to allow for the taper. I open up the centre most ribs

with a curled up piece of wet and dry to suit the ferruled ends on the tubes. I used CF dihedral joiners on the Hustler but for the Witch Hawk I decided to use 2 mm alloy rod at the centre dihedral join and 1.5 mm alloy rod on the tips.

When building with tubes I pin solid pieces of wood to the ends of the bays to keep everything in place and then after putting the ribs on the spar I pin the lot together over the plan and slot the TE to fit. After the TE is done the front of the ribs will need a little chamfer to match the LE and once that is done you glue it all in place with PVA or superglue. I use thick superglue to glue the ribs to the spars and when the glue is dry I take the panel off the board and superglue the places I missed when it was pinned down. The end plates also come in handy if you are shaping your own TE & LE with a razor plane. For the dihedral joins I bend the alloy welding rod to the correct angle, slip

to make it easier to bend you coat it

with a layer of soot from a carburising

flame (a candle will do) and then use a

natural flame to burn it off, let it cool

down before handling and that's it no

quenching. I bend the alloy welding

panels together and sand the joins in

rod to the correct angle, slip the

situ.

the panels together, sand the joins in situ and then glue with epoxy. The LE and TE joins can be reinforced with either SIG Koverall or very light glass cloth doped on.

tubular tail boom if you do not bury the DT line in it. This can be a little tricky especially getting the line through the alloy tubing so I put a little slot before the tubing so I can thread it through easier. The incidence adjuster is made from a 3 mm pop rivet tapped out to 2 mm. File the flats while it is still on the mandrel to make holding it for tapping easier. To anneal alloy tubing

There is not much sense in having a

The motor is a Cobra 1407 4100 kv running a 5030 carbon fibre prop mounted on a 2.5 mm carbon fibre mount I made from the arm of a cheap drone frame. The ESC is a 20A V Good which as far as I can tell is exactly the same as a Turnigy 20A 32 bit ESC but a lot cheaper. The battery is a Turnigy Nano-Tech Plus 300 mAh 2S 70C and it fits neatly into the front of the fuselage. The timer is the Australian made Detox which although being very compact is still a tight fit because I built the fuselage with the original taper. If I built another it would be just a parallel box.

The covering is Coverlite- Litespan using Balsaloc as an adhesive. I covered the front and rear of the fuselage with lightweight glass cloth doped on with a coat of red one pack epoxy over the lot to make it more visible. I was a little disappointed it came in at 130g but I was not very fussy with my wood selection and the paint must have added a gram or two. I had a few inconclusive test flights before packing up and going home to add a bigger rudder tab and another 0.5mm incidence on the wing. The climb was fast, the glide ok and the DT very positive. I found the DTox very easy to use and it takes up very little room. I use 6lb monofilament with around 10mm stretch straight onto the DT latch, no rubber band.

Facebook kept us informed and Matt didn't get much sleep some nights.

He said "The Green Wattle Creek fire has been my worry, check out the fires near me on the app - my address 90 Frankum Dr Orangeville.

The smoke here this morning has visibility down to 500m

I have survived the fire only just. It got as close as 3 km when the main front burst out of the valley last Thursday night with a spot fire 1 km away. A grass fire on Friday was less than a metre from my workshop.

I have been on "watch and act" many times and "emergency" several times.

I have the house and workshop to look after, but on different properties. They both have tanks, pumps and hoses."

And then in February, Matt got flooded!

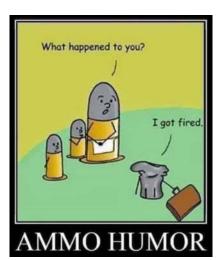

The Wedding

The wedding ceremony came to the point where the Minister asked if anyone had anything to say concerning the union of the bride and groom. It was their time to stand up and talk, or forever hold their peace.

The moment of utter silence was broken by a beautiful young woman carrying her baby son.

She stood up and started walking slowly towards the pastor. The congregation was aghast as the penny dropped. The Groom's jaw dropped as he stared disbelievingly at the approaching young woman and child. Chaos ensued.

The bride threw the bouquet in the air and burst out crying. Then the groom's mother fainted.

The Best men started giving each other looks and wondering how best to help save the situation.

The Minister asked the woman, "Can you tell us, why you came forward? What do you have to say?"

There was absolute silence in the church.

The woman replied, "We can't hear at the back."

GETTING THE MESSAGE OUT

Over the last ten years, I have taken many free flight photos and have selected my best for the international website Flickr. Access to these photos is free. This is a promotional vehicle for our sport and it has received quite a few hits. Naturally international events generate the most interest but you may be surprised how much attention events in Australia receive. Does this translate into more overseas visitors? Maybe, but I do believe it has placed our competitions on the international radar.

If you are interested, start off at my home page link shown below, scroll up or down and pick whichever albums (events) interest you:

https://www.flickr.c om/photos/motor-racing-photography/albums/with/72157692009735871

DMcG on FB: No denying it. I'm dealing with Free Flight Burnout. All of my planes need fixing, builds need to be finished and no energy or desire to do any of it.

I'm sure I'm not alone. Taking time off is an option for sure but I feel that I've taken quite a bit of time off all

ready. I attended the WC at Lost Hills and flew in several comps. Normally I come back with lots of energy. Not this time.

What do you do to keep the Free Flight fires burning?

MY PRIVATE REPLY: What a great thread you've started on FB. And brave to do so as well. I too returned from the World Champs with the same feeling, a feeling I've been nurturing for a few years now. Burnout robs me of motivation and it's hard to rekindle enthusiasm. My involvement in FF extends beyond building and flying, to editing 2 major AUS FF newsletters, FF photography and FF committees. I lack the

March 2020 Free Flight Down Under

enthusiasm to build after I do all my FF "jobs".

But I still get a kick when I open a can of dope, a bottle of diesel fuel or balsa cement. E36 was a definite kick starter to catch my attention and Kathy shares my passion for gliders and E36. And she beats me too! But I also fly 4 rubber classes, 5 glider classes and 3 power classes.

I have lots I could build from scratch or from kits and my fair share of repairs; I just lack motivation. In AUS, we have men's sheds where likeminded older men get together and build things for charity and personal satisfaction. I have suggested to our Brisbane FF club president that we should have a weekly meeting in his

workshop to encourage activity. He hasn't picked up on it because he's too busy building!

It's a great hobby, but it can be consuming and depressing - it's just finding the balance. If you feel like it, send me your email address and I'll send you our club newsletter - a lot of OS flyers really appreciate it - and it might help?

DMcG's PRIVATE ANSWER: Hi Malcolm, thanks for the kind words. I'd love to see your club newsletter.

Meeting with like-minded people makes a huge difference for sure. There aren't any other free flight people where I live that I know of.

That's why attending contest is important. Challenge is the closest but is a 6 hour drive and occurs in our fall months. Lost Hills is great but the travel commitment is tough. As you know! In my case it's lots of driving which I enjoy for the most part. I can't do it often enough though!

I look forward to the newsletter.
Once again Thanks!

Anyone else know the feeling?

Innovative developer Harry Sokol has just informed me of a new product

I built a glider! 'Jetstream', from the Ambroid kit plan via OuterZone. This was another one of those 'I built one when I was a wee lad' so I had to build one again. But there was a dilemma.... I had no DT timer for it.

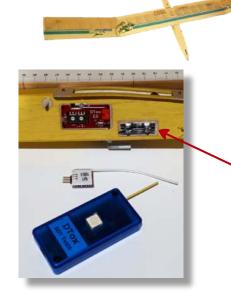

DTox laboratories to the rescue once again.

Building on the soon to be extremely popular type-E2 E36 timer, a variant was produced, the **single function type-EG**, with exceptionally easy programming. Just dial in the number of seconds on the two rotary switches and Robert is your Uncle!

The type-EG has, as all DTox timers, RDT capability so, pulling up the DTox socks, the DTox RDT is just about complete, having survived early flight trials and only requiring full range testing.

The shiny thing to the right of the timer is the auto rudder activation combined with a micro-switch to start the timer upon line release.

The pictured RDT transmitter and receiver (left) are the final configurations, soon to be included on the website along with details of the type-EG timer. www.4dfx.com.au/DTox is the place to go to discover all you need to know about DTox timers.

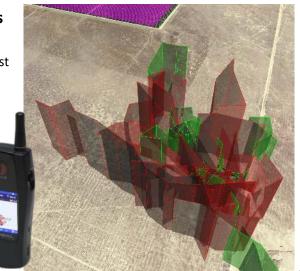

iCare GPS flight paths

UK F1H flyer Chris Edge put up 10 flights in one day at Lost Hills in October, when the Sierra and Kotuku Cups were run concurrently.

It looks like most flights DT'ed from great height and didn't stray too far from the flight line.

GPS units sure add a new dimension to model retrieving.

WANTED: YOUR WORKBENCH

Are you proud of your model bench? Is your current WIP worthy of exposure? Why don't you send me photos of what you've been up to? Maybe your modelling area is extremely tidy or extraordinarily messy. I'm sure we all want to see it. Let's see how many photos I can collect for future FFDUs.

VALE TED BURFEIN 10 March 1963 - 20 February 2020

Ted Burfein will truly be missed from his chosen sport. Ted was an intelligent man, large framed and full of enthusiasm. He loved his Free Flight modelling and was respected by his peers. He flew all premier classes in Free Flight and did well, particularly in F1B. He wanted another try at the Australian World Champs Team and that was his plan for 2020. Ted flew F1A, F1B, F1C, F1G and F1J, and was the AFFS president for two years. He was previously heavily involved in control line, and once managed the Australian Free Flight Team at the Croatian World Championships. Ted was

nice to be around, dynamic and with a kind heart. I was so pleased to have spoken with him just ten days before we lost him. He actually sounded well but was composed to his fate. On Thursday 20th February, the cruel and savage disease took him so suddenly. I know the weary path a carer can walk and I'm thankful Sonya has been spared that journey, and that Ted has missed a dreadful treatment regime. My sincere condolences to Sonya and their families.

Malcolm Campbell

REST IN PEACE Charles Edward Burfein

Float Documentary

For ten years, filmmakers Ben Saks and Phil Kibbe have been collecting interviews and film footage at F1D World Championship events in Serbia, Romania and the USA. They have finally finished their documentary – an inspiring achievement that tells the story of this niche area of ultralight model planes, the history, the stress of competition at the highest level, and the precarious future for the category. Well worth the US\$29 cost – order via their website.
